

Mr. Dennis Galati, Quality Manager,  
and Mr. John Blake, General Manager,  
of Fluid Sealing Products.

## **Fluid Sealing Products joins list of “Whitford Recommended Coaters”**

*August 2011, Houston, TX.* Based in Houston, Fluid Sealing Products has been a well respected applicator of Whitford coatings since 1996. Its business lies primarily in the industrial field, in which the company applies Whitford's Xylan® to stud bolts and fasteners.

Fluid Sealing Products is also a manufacturer and distributor of gaskets, packing, stud bolts and fasteners. The company sells into the oil field and offshore industries, chemical processing plants, and the marine and pipeline markets.

Whitford, maker of the world's largest, most complete line of fluoropolymer coatings, recently launched the "Whitford Recommended Coater" program for special applicators such as Fluid Sealing Products who have proven their ability to apply Whitford coatings at consistently high levels of quality over time.

These select WRC applicators must have certain equipment, provide a strict quality-control program, maintain solid financial standing and participate in Whitford's "University of Whitford" intensive training program.

Said Mr. Blake on receiving the award from Craig Smith, Whitford's representative for the area, "We've worked closely with Whitford for many years, and appreciate their support. We are grateful for this recognition."
